Thank you Andrew, good job today on follow up on this issue. Is the baffle or pig or whatever it is called placed downstream of the sample location, is that why it is only on one side?

Thank you,

Lynn M. Juett

Are the photos or even just locations of the sediment sampling from January on the web map? I cannot find a layer to turn on to show those?

Thank you,

Here are a couple of pictures of Outfall #4 which is not far from where Sed-4 was collected back in January.

The first was taken by Matt Stewart with Feezor Engineering the day after the first of the storms at the Site from last week.

The second was taken by James a couple of days later. You can see where this photo and a couple of other photos were taken if you get on the recon map.

Here is a link:

<https://epa.maps.arcgis.com/home/webmap/viewer.html?webmap=5912c1433666470eb20ebe4e167ed2a3>

You will have to login to see.

As Brad mentioned, Andrew is on-site and could provide additional photos if needed.

I will try to call if I can shortly.

Tom

Brad and/or Tom – please call me as soon as possible – whoever has the most knowledge of where the January sample #4 was taken and what the drainage in that area looks like.

Thank you,

Right and all of the area 1/2 data are lab data report. For better understanding this information we need to see prps interpretive table to compare for our review. Paul generating those now as I currently understand.

To my knowledge, the AAA trailer samples and the more recent (two additional) sediment samples should come with the next NCC monthly report. The last report was sent to me on the tenth of the month so I expect this report in the next few days.

I had asked paul to provide the data early if it was available but I suspect with everything else going on that he does not remember that I asked him.

Whether it is validated, we will have to ask Paul.

I don't believe we have received yet but maybe Brad knows something I don't.

Came with lab reports in monthly but came with all of the monthly data files so need to look through it for completeness and results.

**Remind me, do we have the results of the soil sampling that the prps did?
(not the sediment sampling)**

? If so, is it validated data?
